## Abstract

**Purpose:** To develop and disseminate HIT evidence and evidence-based tools to improve healthcare decision making through the use of integrated data and knowledge management.

**Scope:** To create a generalizable system to facilitate detection and clinician reporting of vaccine adverse events, in order to improve the safety of national vaccination programs.

**Methods:** Electronic medical records available from all ambulatory care encounters in a large multi-specialty practice were used. Every patient receiving a vaccine was automatically identified, and for the next 30 days, their health care diagnostic codes, laboratory tests, and medication prescriptions were evaluated for values suggestive of an adverse event.

**Results:** Restructuring at CDC and consequent delays in terms of decision making have made it challenging despite best efforts to move forward with discussions regarding the evaluation of ESP:VAERS performance in a randomized trial and comparison of ESP:VAERS performance to existing VAERS and Vaccine Safety Datalink data. However, Preliminary data were collected and analyzed and this initiative has been presented at a number of national symposia.

**Key Words:** electronic health records, vaccinations, adverse event reporting

The authors of this report are responsible for its content. Statements in the report should not be construed as endorsement by the Agency for Healthcare Research and Quality or the U.S. Department of Health and Human Services of a particular drug, device, test, treatment, or other clinical service.

# Final Report

## Purpose

This research project was funded to improve the quality of vaccination programs by improving the quality of physician adverse vaccine event detection and reporting to the national Vaccine Adverse Event Reporting System (VAERS), via the following aims:

**Aim 1.** Identify required data elements, and develop systems to monitor ambulatory care electronic medical records for adverse events following vaccine administration.

**Aim 2.** Prepare, and securely submit clinician approved, electronic reports to the national Vaccine Adverse Event Reporting System (VAERS).

**Aim 3.** Comprehensively evaluate ESP:VAERS performance in a randomized trial, and in comparison to existing VAERS and Vaccine Safety Datalink data.

**Aim 4.** Distribute documentation and application software developed and refined in Aims 1 and 2 that are portable to other ambulatory care settings and to other EMR systems.

## Scope

Public and professional confidence in vaccination depends on reliable postmarketing surveillance systems to ensure that rare and unexpected adverse effects are rapidly identified. The goal of this project is to improve the quality of vaccination programs by improving the quality of physician adverse vaccine event detection and reporting to the national Vaccine Adverse Event Reporting System (VAERS). This project is serving as an extension of the Electronic Support for Public Health (ESP) project, an automated system using electronic health record (EHR) data to detect and securely report cases of certain diseases to a local public health authority. ESP provides a ready-made platform for automatically converting clinical, laboratory, prescription, and demographic data from almost any EHR system into database tables on a completely independent server, physically located and secured by the same logical and physical security as the EHR data itself. The ESP:VAERS project developed criteria and algorithms to identify important adverse events related to vaccinations in ambulatory care EHR data, and made attempts at formatting and securely sending electronic VAERS reports directly to the Centers for Disease Control and Prevention (CDC).

Patient data were available from Epic System's Certification Commission for Health Information Technology-certified EpicCare system at all ambulatory care encounters within Atrius Health, a large multispecialty group practice with over 35 facilities. Every patient receiving a vaccine was automatically identified, and for the next 30 days, their health care diagnostic codes, laboratory tests, and medication prescriptions are evaluated for values

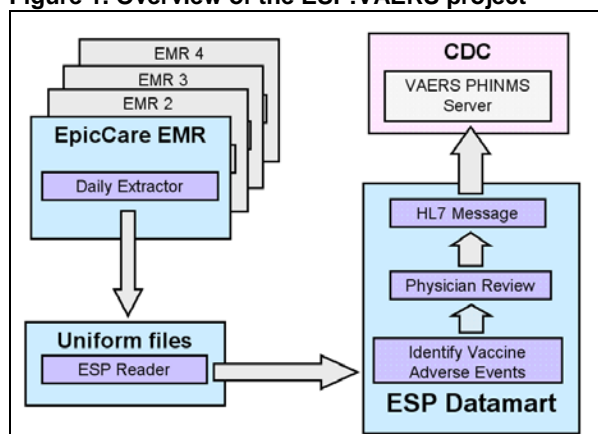

suggestive of an adverse vaccine event. When a possible adverse event was detected, it was recorded, and the appropriate clinician was to be notified electronically.

Clinicians in-basket messaging was designed to provide a preview a pre-populated report with information from the EHR about the patient, including vaccine type, lot number, and possible adverse effect, to inform their clinical judgment regarding whether they wish to send a report to VAERS. Clinicians would then have the option of adding free-text comments to pre-populated VAERS reports or to document their decision not to send a report. The CDC's Public Health Information Network Messaging System (PHIN-MS) software was installed within the facilities so that the approved reports could be securely transferred to VAERS as electronic messages in an interoperable health data exchange format using Health Level 7 (HL7).

## Methods

The goal of Aim 1: *Identify required data elements, and develop systems to monitor ambulatory care electronic medical records for adverse events following vaccine administration*, and Aim 2: *Prepare, and securely submit clinician approved, electronic reports to the national Vaccine Adverse Event Reporting System (VAERS)*, was to construct the below flow of data in order to support the first two Aims:

**Figure 1. Overview of the ESP:VAERS project**

Existing and functioning ESP components are shown on the left, and Aims 1 and 2 on the right. ESP:VAERS flags every vaccinated patient, and prospectively accumulate that patient's diagnostic codes, laboratory tests, allergy lists, vital signs, and medication prescriptions. A main component of Aim 1 was to *Develop AE criteria to assess these parameters for new or abnormal values that might be suggestive of an adverse effect*. A reporting protocol & corresponding algorithms were developed to detect potential adverse event cases using diagnostic codes, and methods were tested to identify prescriptions or abnormal laboratory values that might be suggestive of an adverse effect. These algorithms were designed to seek both expected and unexpected adverse effects.

This reporting protocol was approved by both internal & external partners. We initially prepared a draft document describing the elements, algorithms, interval of interest after vaccination, and actions for broad classes of post-vaccination events, including those to be reported immediately without delay (such as acute anaphylactic reaction following vaccination), those never to be reported (such as routine check-ups following vaccination) and those to be reported at the discretion and with additional information from the attending physician through a feedback mechanism. The draft was then widely circulated as an initial / working draft for comment by relevant staff in the CDC and among our clinical colleagues at Atrius. In addition to review by the internal CDC Brighton Collaboration liaison, this protocol has also received review & comment via the CDC's Clinical Immunization Safety Assessment (CISA) Network.

The goal of Aim 2 was the *Development of HL7 messages code for ESP:VAERS to ensure secure transmission to CDC via PHIN-MS*. The HL7 specification describing the elements for an electronic message to be submitted to Constella, the consultants engaged by CDC for this project was implemented. Synthetic and real test data was been generated and transmitted between Harvard and Constella. However, real data transmissions of non-physician approved reports to the CDC was unable to commence, as by the end of this project, the CDC had yet to respond to multiple requests to partner for this activity.

The goal of Aim 3 was to *Comprehensively evaluate ESP:VAERS performance in a randomized trial, and in comparison to existing VAERS and Vaccine Safety Datalink data*.

We had initially planned to evaluate the system by comparing adverse event findings to those in the Vaccine Safety Datalink project—a collaborative effort between CDC's Immunization Safety Office and eight large managed care organizations. Through a randomized trial, we would also test the hypothesis that the combination of secure, computer-assisted, clinician-approved, adverse event detection, and automated electronic reporting will substantially increase the number, completeness, validity, and timeliness of physician-approved case reports to VAERS compared to the existing spontaneous reporting system; however, due to restructuring at CDC and consequent delays in terms of decision making, it became impossible to move forward with discussions regarding the evaluation of ESP:VAERS performance in a randomized trial, and compare ESP:VAERS performance to existing VAERS and Vaccine Safety Datalink data. Therefore, the components under this particular Aim were not achieved.

Aim 4 *Distribution of documentation and application software developed and refined in Aims 1 and 2 that are portable to other ambulatory care settings and to other EMR systems* has been successfully completed. Functioning source code is available to share under an approved open source license. ESP:VAERS source code is available as part of the ESP source code distribution. It is licensed under the LGPL, an open source license compatible with commercial use. We have added the ESP:VAERS code, HL7 and other specifications and documentation to the existing ESP web documentation and distribution resource center <http://esphhealth.org>, specifically, the Subversion repository available at: <http://esphhealth.org/trac/ESP/wiki/ESPVAERS>.

## Results

Preliminary data were collected from June 2006 through October 2009 on 715,000 patients, and 1.4 million doses (of 45 different vaccines) were given to 376,452 individuals. Of these doses, 35,570 possible reactions (2.6 percent of vaccinations) were identified. This is an average of 890 possible events, an average of 1.3 events per clinician, per month. These data were presented at the 2009 AMIA conference.

In addition, ESP:VAERS investigators participated on a panel to explore the perspective of clinicians, electronic health record (EHR) vendors, the pharmaceutical industry, and the FDA towards systems that use proactive, automated adverse event reporting.

Adverse events from drugs and vaccines are common, but underreported. Although 25% of ambulatory patients experience an adverse drug event, less than 0.3% of all adverse drug events and 1-13% of serious events are reported to the Food and Drug Administration (FDA). Likewise, fewer than 1% of vaccine adverse events are reported. Low reporting rates preclude or slow the identification of “problem” drugs and vaccines that endanger public health. New surveillance methods for drug and vaccine adverse effects are needed. Barriers to reporting include a lack of clinician awareness, uncertainty about when and what to report, as well as the burdens of reporting: reporting is not part of clinicians’ usual workflow, takes time, and is duplicative. Proactive, spontaneous, automated adverse event reporting imbedded within EHRs and other information systems has the potential to speed the identification of problems with new drugs and more careful quantification of the risks of older drugs.

Unfortunately, there was never an opportunity to perform system performance assessments because the necessary CDC contacts were no longer available and the CDC consultants responsible for receiving data were no longer responsive to our multiple requests to proceed with testing and evaluation.

## Inclusion of AHRQ Priority Populations

The focus of our project was the Atrius Health (formerly HealthOne) provider & patient community. This community serves several AHRQ inclusion populations, specifically low-income and minority populations in primarily urban settings.

Atrius currently employs approximately 700 physicians to serve 500,000 patients at more than 18 office sites spread throughout the greater Metropolitan Boston area. The majority of Atrius physicians are primary care internal medicine physicians or pediatricians but the network also includes physicians from every major specialty.

The entire adult and pediatric population served by Atrius was included in our adverse event surveillance system (ESP:VAERS). Atrius serves a full spectrum of patients that reflects the broad diversity of Eastern Massachusetts. A recent analysis suggests that the population served by Atrius is 56% female, 16.6% African American, 4% Hispanic. The prevalence of type 2 diabetes in the adult population is 5.7%. About a quarter of the Atrius population is under age 18.

2232	12.06.2021	 <p>21:45</p> <p>Vaccine efficiency</p> <p>Anila Nalluri Jun 12</p> <p>To, Whomsoever concerned. This is to inform you that my grandfather Mr. N. Koteswara Rao, 85 years</p> <p>feedback@bharatbiotech.com 21:27</p> <p>Dear Madam,</p> <p>We are extremely sorry for your loss, and please accept our deepest condolences during this very difficult time.</p> <p>Patient safety is our main priority and we investigate all serious cases with utmost diligence. In this regard, we request you to please send hospital notes/discharge summary/lab investigations/treatment chart/OPD prescription. We also request you to please send the vaccination certificates and the date of onset of COVID symptoms/RT-PCR test. Please note that the occurrence of death have been reported with all COVID-19 vaccines. These kind of breakthrough infections are seen in some vaccine recipients. This happens because the virus continues to circulate widely and newer variants of the virus are also emerging. Kindly revert for any clarifications.</p> <p>Thanks and Regards, Bharat Biotech International Limited.</p>	<p>Andhra Pradesh: Guntur</p> <p>Mr. N. Koteswara Rao (85), died on May 25 due to contracting Covid Pneumonia, weeks after receiving second dose of Covaxin COVID-19 vaccine.</p> <p>When contacted, Bharat Biotech said, "occurrence of deaths have been reported with all Covid-19 vaccines &amp; it's because of breakthrough infection from the virus that's widely circulating".</p>	 <p>21:56</p> <p>VWIFI2</p> <p>Anila Nalluri 17:03</p> <p>to feedback</p> <p>From: Anila Nalluri • anilasainalluri@gmail.com</p> <p>To: feedback@bharatbiotech.com</p> <p>Date: Jun 12, 2021, 17:03</p> <p><a href="#">View security details</a></p> <p>To,</p> <p>Whom so ever concerned.</p> <p>This is to inform you that my grandfather Mr. N. Koteswara Rao, 85 years old had taken his 2nd dose of Covaxin in month of April and tested positive in the first week of May. Even though he tested positive we were hopeful of his recovery since he had taken his vaccine and he doesn't have any severe comorbidities except diabetes. But, unfortunately he had passed away on May 25th due to severe pneumonia. We are still not able to believe this happened after being fully vaccinated and having been told that there would be no case of mortality if vaccinated. PFA proof of vaccination for your reference.</p> <p>Thanks and regards, Anila Nalluri</p> <p>ID Verified / Aadhaar # XXXXXXXX09874</p> <p>Vaccination at: PCMC - LALITHA HOSP GUNTUR, Guntur, Andhra Pradesh</p>

3358	25.07.2021	NEWSPAPER	<p>Himachal Pradesh: Mandi district</p> <p>Krishna (50+), a woman pharmacist from health department at Sundernagar city died on Sunday, July 25, few days after receiving second dose of COVID-19 vaccine.</p>	<div data-bbox="1456 252 2002 421"> <h2>कृष्णा...आप हमेशा स्मृतियों में शाश्वत रहोगे</h2> </div> <div data-bbox="2002 252 2112 555">  </div> <p>मृत्यु जीवन का सबसे बड़ा सच है। मानस अवतार में साक्षात नारायण भगवान श्रीराम और श्रीकृष्ण को भी दैहिक संसार छोड़ना पड़ा है, फिर हम सब तो प्राणी मात्र हैं। जन्म होगा तो एक दिन मरण भी होगा, यह तय है। यही सृष्टि का नियम है...अनंत चक्र है। जाना सभी को है, कोई आगे जाता है तो कोई पीछे, परंतु जाने का कोई नियम तय नहीं है, यही चुभता और अखरता है।</p> <p>यह भावनात्मक संबंध ही हैं, जो हमें एक दूसरे के प्रति संवेदना और करुणा से भर के प्रति प्रेम और पीड़ा का अनुभव कराते हैं। कृष्णा और मैं वर्ष 1992 में विवाह के बंधन में जुलाई के लगन रहे और अग्नि को साक्षी मानकर हम दोनों ने जिंदगी भर सुख-दुख, हर मौसम साथ निभाने की शपथ और संकल्प लिया। मेरा जीवन भी कई उतार चढ़ाव का साक्षी रहा है, कदम पर सेवा और समर्पण से मेरा साथ निभाती चली गई। मुश्किल हालात में भी कभी मुझे कुछ महीने पहले की ही तो बात है बेटा एमबीबीएस डाक्टर बना तो उस दिन कृष्णा कितनी जीवन भर की तपस्या सफल हो गई हो। बेटे की नजर उतारते थकती नहीं थीं वह, मां जो ठह सब कुछ तो ठीक ठाक चल रहा था जीवन में। बेटा डाक्टर बन गया और कृष्णा ने भी पहले स्वास्थ्य विभाग में फार्मासिस्ट पद पर सेवाएं देनी शुरू कर दीं, लेकिन विधि के विधान टाल पाया है। हमारे हंसते खेलते परिवार को शायद किसी की बुरी नजर लग गई। बीते 25 जु में सुनामी उठी और सब कुछ तहस नहस कर चली गई। बेरहम वक्त ने हमारी कृष्णा को हम लिए छिन लिया। वह कृष्णा जो कभी बीमार नहीं हुई, अमूमन कभी सर्दी जुकाम तक को दब वह इस तरह से चिर निद्रा में शांत हो जाएंगी..यह रूह झकझोर कर रख देने वाली त्रासदी रही दोस्तों, कोरोना के इस दौर ने मानव जाति को बड़ी मुश्किल में डाल रखा है। संक्रमण से कृष्णा ने भी वैक्सीन लगवाई, मगर पहली ही डोज लेने के बाद उनकी दोनों टांगों में भारी सूजन चिकित्सीय सेवाएं लेने पर ही कुछ आराम मिल सका। वैक्सीन की दूसरी डोज लेने के कुछ ही दिनों की अचानक मृत्यु हो गई। दूसरे भुक्तभोगियों की तरह ही मेरा नजरिया भी वैक्सीन की विश्व तो सवाल खड़े कर रहा है। हालांकि मेडिकल एक्सपर्ट्स शायद मेरे तर्क से संतुष्ट या सहमत हमने परिवार के एक सदस्य को खोया है। इसलिए असहनीय पीड़ा से हम ही गुजर रहे हैं।</p> <p>कृष्णा, यह जाने का समय नहीं था, बिल्कुल भी नहीं। आप हमेशा स्मृतियों क्योंकि कृष्ण नाम शाश्वत है।</p>

## Nearly 11,000 Deaths After COVID Vaccines Reported to CDC, as FDA Adds New Warning to J&J Vaccine

VAERS data released today by the CDC showed a total of 463,457 reports of adverse events from all age groups following COVID vaccines, including 10,991 deaths and 48,385 serious injuries between Dec. 14, 2020 and July 9, 2021.

By [Megan Redshaw](#)

**The Defender is experiencing censorship** on many social channels. Be sure to stay in touch with the news

[Privacy policy](#)

The data comes directly from reports submitted to the [Vaccine Adverse Event Reporting System \(VAERS\)](#), the primary government-funded system for reporting adverse vaccine reactions in the U.S.

Every Friday, [VAERS](#) makes public all vaccine injury reports received as of a specified date, usually about a week prior to the release date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed.

Data released today show that between Dec. 14, 2020 and July 9, 2021, a total of **463,457 total adverse events** were reported to VAERS, including **10,991 deaths** — an increase of 1,943 over the previous week. There were **48,385 serious injuries** reported during the same time period — up 7,370 compared with the previous week.

**National Vaccine  
Information Center**  
Your Health. Your Family. Your Choice.

## Search Results

From the 7/9/2021 release of VAERS data:

**Found 463,457 cases where Vaccine is COVID19**

Table

 Event Outcome	 Count	 Percent
Death	10,991	2.37%
Permanent Disability	9,274	2%
Office Visit	82,534	17.81%
Emergency Room	56	0.01%
Emergency Doctor/Room	59,347	12.81%
Hospitalized	30,699	6.62%
Hospitalized, Prolonged	82	0.02%
Recovered	164,784	35.56%
Birth Defect	256	0.06%
Life Threatening	8,831	1.91%
Not Serious	184,318	39.77%
<b>TOTAL</b>	<b>† 551,172</b>	<b>† 118.93%</b>

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 463457 (the number of cases found), and the Total Percentage is greater than 100.

In the U.S., **333 million** COVID vaccine doses had been administered as of July 9. This **includes**: 135 million doses of **Moderna's** vaccine, 184 million doses of **Pfizer** and 13 million doses of the **Johnson & Johnson (J&J)** COVID vaccine.

Of the 10,991 deaths reported as of July 9, **22% occurred** within 48 hours of vaccination, **15% occurred** within 24 hours and **37% occurred** in people who became ill within 48 hours of being vaccinated.

This week's data for 12- to 17-year-olds show:

- **14,003** total adverse events, including **866 rated as serious** and **14 reported deaths**. Two of the

Other reports include two [13-year-old boys](#) (VAERS I.D. [1406840](#) and [1429457](#)) who died two days after receiving a Pfizer vaccine, three 15-year-olds (VAERS I.D. [1187918](#), [1382906](#) and [1242573](#)), three 16-year-olds (VAERS I.D. [1420630](#), [1225942](#) and [1386841](#)) and three 17-year-olds (VAERS I.D. [1199455](#), [1388042](#) and [1420762](#)).

- [2,040 reports](#) of anaphylaxis among 12- to 17-year-olds with 99% of cases attributed to [Pfizer's vaccine](#), 1.1% to [Moderna](#) and 0.2% (or four cases) to [J&J](#).
- [377 reports](#) of myocarditis and pericarditis (heart inflammation) with [373](#) attributed to Pfizer's vaccine.
- [65 reports](#) of blood clotting disorders, with [64](#) attributed to [Pfizer](#) and [1](#) attributed to [Moderna](#).

This week's total VAERS data, from Dec. 14, 2020 to July 9, 2021, for all age groups combined show:

- 23% of deaths were related to cardiac disorders.
- 50% of those who died were male, 45% were female and the remaining death reports did not include gender of the deceased.
- The [average age](#) of death was 75.
- As of July 9, [2,857 pregnant women](#) reported adverse events related to COVID vaccines, including 1072 reports of [miscarriage or premature birth](#).
- Of the [5,049 cases of Bell's Palsy reported](#), 63% were attributed to Pfizer vaccinations, 35% to Moderna vaccine and 5% to J&J.
- 445 reports of [Guillain-Barré Syndrome](#), with 51% of cases attributed to Pfizer, 37% to Moderna and 17% to J&J.
- [127,421 reports of anaphylaxis](#) with 48% of cases attributed to [Pfizer's vaccine](#), 45% to [Moderna](#) and 7% to [J&J](#).
- [9,471 reports](#) of blood clotting disorders. Of those, [4,998 reports](#) were attributed to Pfizer, [2,845 reports](#) to Moderna and [1,582 reports](#) to J&J.
- [1,991 cases](#) of myocarditis and pericarditis with [1,336 cases](#) attributed to Pfizer, [599 cases](#) to Moderna and [52 cases](#) to J&J's COVID vaccine.

### Experts warn of 'huge risk' as Moderna launches COVID vaccine trials for pregnant women

Moderna will study its [COVID vaccine](#) in pregnant women, according to a posting on [ClinicalTrials.gov](#). The observational study, expected to begin July 22, will enroll about 1,000 females over age 18 who will be studied over a 21-month period.

Women who [received a Moderna vaccine](#) during the 28 days prior to their last menstrual period, or at any time during pregnancy, are eligible.

The [brief summary](#) of the trial states the main goal is "to evaluate the outcomes of pregnancy in females exposed to the [Moderna](#) COVID-19 vaccine (mRNA-1273) during pregnancy."

Currently, the CDC [says](#) pregnant women can get a [COVID vaccine](#). But the agency also acknowledges there is limited data available about the safety of COVID vaccines for people who are pregnant.

We use cookies to ensure that we give you the best experience on our website. You consent to our cookies if you continue to use our website.

Ok Privacy policy

evidence COVID vaccines are safe, but [ample evidence](#) suggesting it is dangerous to expose pregnant women and unborn babies to drugs and interventions that can disrupt immunity.

Lyn Redwood, RN, MSN and president emerita of [Children's Health Defense](#), said it's "bass-ackwards to release the vaccine to pregnant women before doing a clinical trial or proper animal studies."

### **FDA added warning to J&J vaccine of 'serious but rare' autoimmune disorder**

On July 13, the FDA [added a new warning](#) on J&J's (Janssen) COVID vaccine to [include information](#) pertaining to an observed increased risk of [Guillain-Barré Syndrome](#) (GBS) following vaccination.

According to an [FDA news release](#), GBS is a neurological disorder in which the body's immune system damages nerve cells, causing muscle weakness or, in the most severe cases, paralysis.

Based on an analysis of VAERS data, there have been 100 preliminary reports of GBS following vaccination with J&J's vaccine. Of these reports, 95 were serious and required hospitalization. There was one reported death.

While the cause of GBS is not fully known, it often follows infection with a virus and has been [linked to other vaccines](#). The FDA concluded the benefits of the vaccine outweigh any danger, but included the proviso in fact sheets about the drug for providers and patients.

The CDC's Advisory Committee on Immunization Practices (ACIP) is expected to [discuss the GBS cases](#) during an upcoming meeting, the CDC said.

### **Coroner says vaccine not to blame for man's death after Pfizer— wife not convinced**

A healthcare worker who [died](#) four days after his second dose of Pfizer's COVID vaccine was killed by heart disease, according to the [Orange County, California coroner](#).

As [The Defender reported](#) this week, Tim Zook, an x-ray technologist at South Coast Global Medical Center in Santa Ana, was hospitalized Jan. 5 — just hours after being vaccinated. Zook's wife, Rochelle, [told the Orange County Register](#) her husband's health rapidly deteriorated after receiving his second dose of Pfizer's vaccine. He died Jan. 9.

An [autopsy report](#) released Wednesday found Zook's heart was severely enlarged, thicker than normal and dilated. "There is a focus of severe coronary artery disease," according to the report, which also said Zook's heart valves showed mild-to-moderate calcium deposits.

[Privacy policy](#)

husband's tissue for future testing, hoping to learn more as data about vaccines emerge in years to come.

## Woman's sudden paralysis linked to J&J vaccine

A Houston woman spent 22 days in the hospital after getting a COVID vaccine and then developing GBS, [ABC 13 reported July 14](#). After Jamie Walton got the J&J vaccine, she started feeling numbness and tingling in her feet and hands.

"I know my body and I knew something wasn't right, so I kept trying to go to different doctors and I kept being told, 'You're dehydrated. You're fine,'" Walton said. "One doctor told me I had anxiety."

The otherwise healthy woman ended up paralyzed from the waist down and lost her ability to walk. Walton went to the emergency room twice and met with several doctors before her diagnosis was confirmed. She was hospitalized for 22 days, had to learn how to walk again and do other basic movements. Her case was reported to VAERS.

## Pfizer fails to convince FDA on immediate need for boosters

Pfizer executives met privately this week with U.S. senior scientists and regulators to press their case for quick authorization of [COVID](#) booster vaccines amid pushback from federal health agencies who [last week said](#) the extra doses are not needed.

Officials said after the meeting that more data — and possibly several more months — would be needed before regulators could determine whether booster shots were necessary, [The Defender reported](#).

The meeting was largely seen as a courtesy after Pfizer's [announcement](#) last week that it would seek [Emergency Use Authorization](#) for its booster shot led to unusual pushback from the U.S. Food and Drug Administration (FDA) and CDC.

## Woman with 'life-altering' injuries after COVID vaccine teams up with U.S. senators to demand answers

A Utah woman and two U.S. senators are teaming up to get answers from federal health agencies about [life-altering injuries](#) people have experienced after receiving a COVID vaccine, [The Defender reported](#) July 7.

[Brienne Dessen](#), preschool teacher from Utah, was injured after participating in [AstraZeneca's](#) COVID vaccine clinical trial in November 2020. She accumulated more than \$250,000 in medical bills as a result of injuries she believes were caused by the vaccine.

After experiencing severe symptoms and neurological decline, Dessen spent months teaching herself how to walk, eat and form sentences again — all while she traveled in search of answers.

Dessen, along with other people who said they were injured by vaccines but "[repeatedly ignored](#)" by the medical community, participated last month in a [news conference](#) held by Sen. Ron Johnson (R-Wis).

Following the news conference, Johnson and Utah Sen. Mike Lee [wrote a letter](#) to the CDC and FDA after the agencies ignored requests for assistance and answers from families injured by COVID vaccines.

We use cookies to ensure that we give you the best experience on our website. You consent to our cookies if you continue to use our website.

Ok Privacy policy

In the letter, Lee and Johnson asked the FDA and CDC about the adverse events suffered during clinical trials, disclosed in the FDA's Emergency Use Authorization Memorandum for the [Pfizer](#), [Moderna](#) and [Johnson & Johnson](#) vaccines, as well as reported injuries from the U.S. AstraZeneca trial.

They also asked the CDC whether it is working with physicians and researchers at the FDA, National Institutes of Health or other medical research bodies to provide the various individuals who experienced adverse effects vaccine treatment and care.

### 130 days and counting, CDC ignores The Defender's inquiries

According to the [CDC website](#), "the CDC follows up on any report of death to request additional information and learn more about what occurred and to determine whether the death was a result of the vaccine or unrelated."

On March 8, [The Defender](#) contacted the CDC with a [written list of questions](#) about reported deaths and injuries related to COVID vaccines. We have made repeated attempts, by phone and email, to obtain a response to our questions.

Despite multiple phone and email communications with several people at the CDC, and despite being told that our request was in the system and that someone would respond, we have not yet received answers to any of the questions we submitted. It has been 130 days since we sent our first email to the CDC requesting information.

[Children's Health Defense](#) asks anyone who has experienced an adverse reaction, to any vaccine, to file a report following [these three steps](#).

This is democide. It is the government/corporate state killing the people. Further, word seems to have been sent to all world lackeys that they are to force injections on the people and control the speech of everyone. "Safe and effective" is allowed

To,  
The Hon'ble Prime Minister of India,  
New Delhi  
Dear Sir,

ANNEXURE P-24

**578**

**Sub: Urgent need to stop the overzealous universal vaccination drive against Covid-19.**

We, the undersigned Indian Doctors for Truth, want to bring to your notice certain scientific facts about immunity achieved by Indian population among adults and children, alike, in the light of the latest sero-survey done by AIIMS along with WHO, for immediate action. Looking at the evidence, we urge you to immediately stop the drive for vaccination of the entire population and limit it to voluntary vaccination of only those above 60 years and/or people with severe degree of comorbidity.

The first principle of medicine is Do No Harm. This is often considered a main component of the Hippocratic Oath, which of course is recited at most medical school graduations. Well, sort of. An actual translation of what is written in the Oath would be more like: "I will follow that system of regimen which, according to my ability and judgment, I consider for the benefit of my patients, and abstain from whatever is deleterious and mischievous."

In our submission we want to point out that by ignoring the Medical Knowledge established for last 100 years, and biased by western data and practice, the vaccination drive started in India is doing more harm than any good for the people of India.

We present before you the scientific facts about SARS COV2 related immunity and vaccination.

1. There is enough and robust evidence available now that those who have recovered from Covid 19 develop robust and long-lasting immunity against SARS CoV2, even after mild or asymptomatic infections, and that chances of reinfection among these people, even from the emerging variants of the same virus, are extremely rare or non-existent. The WHO in its interim guidance released on July 2, 2021 has also recognised the fact of acquired immunity in all those who have had previous infection with SARS-CoV-2. [1-11]

2. There is no evidence to show that those who have recovered from the infection will get any additional benefit from vaccination. There is an elegant study from the Cleveland Health System which has conclusively reported that those infected do not get reinfected, whether vaccinated or not. [12-15]

3. The epidemiology of Covid 19 in India is very different from other countries of the world and even within India, there are differences between urban and rural communities and between socioeconomic strata. Therefore, we need to have our own policies regarding prevention of covid19 here, including the policy on vaccination. According to available reports, the percentage of population infected in the US, UK, and such other countries is at 1-23%. In India, recent sero-surveys at Delhi and Mumbai have reported a positivity of 50-70%, indicating that a significant proportion of our people have already been infected, reaching the levels of herd immunity, and will not need the vaccine. <https://www.hindustantimes.com/india-news/kids-adults-have-similar-antibodies-sero-survey-101623953000262.html>

And many reports of India achieving herd immunity have already appeared. The mathematical models have explained how what percentage of population is required to be infected is also different for different population and with mixing rates fitted to social activity, the disease-induced herd immunity level can be ~43%. [19-22]

4. Case Fatality Rate is the rate that is usually reported by the government, that is the number of deaths per 100 confirmed cases as detected by antigen or rt-PCR test. But as renowned Epidemiologist Dr John Ioannidis, whose paper (Attached along with) on WHO site ([https://www.who.int/bulletin/online\\_first/BLT.20.265892.pdf](https://www.who.int/bulletin/online_first/BLT.20.265892.pdf)) shows proper way of counting death rate in diseases with CFR less than 5 is Infection Mortality Rate. That is from serosurveys the actual prevalence of the infection in community is found and death rate counted from that is Infection Fatality Rate. The IFR is less than 0.1% world over and is shown to be so in India from various serosurveys done by ICMR.

5. Covid19 is now proven to be asymptomatic or mild disease with infection fatality rate of 0.001-0.01% or lower, and particularly in the population younger than 30 years, it is mostly asymptomatic and harmless. [23-26] Therefore, considering the fact of high level of infections in India, near herd immunity, and very low levels of Infection Fatality Rates, vaccinating the entire population will not serve any purpose. Looking at the negligible risk to the children from Covid-19, trial of the vaccines for them or even consideration approval is highly unethical.

6. A very important development that has taken place because of 4 latest studies that proves that almost 99.9% population has the memory from previous corona infection and that whether to the actual corona infection or to vaccine it is our same immune memory gets activated and vaccines in fact are more harmful in an already immune population. Based on that Doctors for Covid Ethics have written letter to tens of thousands of doctors in Europe. “Four recent scientific discoveries are herewith brought to your urgent attention. They alter the entire landscape of the COVID-19 pandemic, and they force us to reassess the merits of vaccination against SARS-CoV-2.

### Summary

Rapid and efficient memory-type immune responses occur reliably in virtually all unvaccinated individuals who are exposed to SARS-CoV-2. The effectiveness of further boosting the immune response through vaccination is therefore highly doubtful. Vaccination may instead aggravate disease through antibody-dependent enhancement (ADE). <https://doctors4covidethics.org/letter-to-physicians-four-new-scientific-discoveries-crucial-to-the-safety-and-efficacy-of-covid-19-vaccines/>

7. In the light of availability of many treatments now proving to be effective for SARS-CoV-2 and the realization that the overuse of certain medical procedures and drugs if not repeated many lives can be saved without any vaccines which are not as harmless as portrayed.

8. Government’s own Operative Guidelines have mentioned that “Covid-19 vaccines have limited safety data”. Later advisory by the government about

clotting is also quite revealing. Adverse effects of the vaccine are found world over. As per the EUDRA report dated June 19, more than 1.3 million people in the Europe have had vaccine adverse effects and 13,867 people have died because of the vaccine. Similarly, as per VAERS, 6985 deaths have occurred in the US because of the vaccine and 4,41,931 incidents of vaccine adverse effect have been reported along with 34,065 severe ailments because of the vaccine from 14 December, 2020 to 25 June, 2021. As per MHRA of England, there have been 9,49,000 adverse effects and more than 1300 deaths because of the vaccine. In such circumstances, after vaccinating more than 24 million people, only 488 deaths and a little more than 26,000 adverse effects by AEFI in India is unimaginable. Only the first death because of vaccines is confessed as per AEFI on 15 June, which is also far away from the truth. The prime reason behind this is the inappropriate system of reporting vaccine adverse effects and vaccine deaths in our country.

9. As in most countries, in India also, the death rate from Corona has increased with increase in vaccination drive as is shown by data (Data compiled by Rahul C. Mehta, link below) and the recorded Corona deaths with Vaccine drive in many countries. And that is a matter of investigation. Experts have given various reasons, for vaccinated (Intravascular clotting and Antibody Enhancement) and even nonvaccinated people because of leaking vaccine. It can be purely because lockdown with its deleterious effect on all facets of our lives has increased vulnerability to all infections. Our regular rise of respiratory infections in the months following Holi has just exaggerated because of this lockdown effect. And rt-PCR can detect previous Coronavirus, flu virus and give positive and patient's symptoms can be because of any other disease even if rt-PCR is positive. So, more cases and more deaths are a matter of investigation after vaccination. But because of serosurveys futility of vaccine drive is well

established.

(Refer:

<https://drive.google.com/file/d/1eQJF3KZuAGaPbrPGk0sUUfzb-knhD6K9/view>)

10. The number of deaths per thousand population has not increased in the year 2020 in most countries as much as it increased in last 10 years, when the populations were dealing with Corona virus on their own, death rate has not increased in 2020 it is only after the vaccine drive the deaths have increased. Even in India the death per thousand increased 0.5% in 2019 but 0.49% in 2020.

Considering all the above, we strongly urge the following:

1. The overzealous universal vaccination against Covid-19 drive, with widespread incidences of coercion and vaccination being made mandatory for jobs, examination for students, must be stopped immediately.
2. The people above the age of 60 and people with severe comorbidities may be offered vaccination on voluntary basis with full disclosure of warnings about side effects and lack of safety data as are mentioned in Government's operative Guidelines for Covid-19 vaccination and later declared for Intravascular clotting.
3. In the light of the fact that majority children in our country are also post Covid and on an average 56% of them are having antibodies without ever getting serious disease, All Trials on children for Covid-19 vaccine should stop and in upcoming meetings no consideration is required to approve the vaccines for children who have finished the trial.

4. We also urge the government to institute detailed studies to analyse the observation that there has been surge in cases and deaths due to covid in India since March-April 2021, coinciding with the roll out of the vaccination drive.

We are ready to come and meet you to have a full discussion on this at its earliest and as the matter is urgent and of grave concern, we expect an urgent call from you.

Expecting a prompt action on this front from you,

Indian Doctors for Truth,

### **I Natural Immunity vs Vaccine Induced Immunity:**

Without any scientific data GoI has declared that Vaccine will benefit to even those who had Corona Infection. Whereas naturally acquired immunity is robust and lasts is argued by many individual Doctors in India and abroad and WHO has agreed to it now.

WHO in its 10th May, 2021 report concludes:  
([https://drive.google.com/file/d/1Gm9NYmf1R3ZUXmSEijCYeQ6Defh5bqb / view](https://drive.google.com/file/d/1Gm9NYmf1R3ZUXmSEijCYeQ6Defh5bqb/view))

### **Conclusions**

Current evidence points to most individuals developing strong protective immune responses following natural infection with SARS-CoV-2. However, inaccurate immunodiagnostic tests may falsely indicate infected individuals as naïve to the virus (not previously infected) or may falsely label non-infected people as positive for immune markers of recent infection.

To conclude, available tests and current knowledge do not tell us about the duration of immunity and protection against reinfection, but recent evidence suggests that natural infection may provide similar protection against symptomatic disease as vaccination, at least for the available follow up period.<sup>33</sup> The emergence of variants of concern poses challenges and their potential to evade immunity elicited by either natural infection or by vaccination, needs to be closely monitored.

[https://www.medscape.com/viewarticle/951949?src=WNL\\_dne\\_210528\\_mscpe\\_dit&uac=391223BT&impID=3404007&faf=1](https://www.medscape.com/viewarticle/951949?src=WNL_dne_210528_mscpe_dit&uac=391223BT&impID=3404007&faf=1)

Months after recovery from mild COVID-19, when antibody levels in the blood have declined, immune cells in bone marrow remain ready to pump out new antibodies against the coronavirus, researchers reported in Nature.

<https://dailycaller.com/2021/05/25/marty-makary-cdc-natural-immunity/>

Makary, however, disputed claims that natural immunity is inferior to that acquired through vaccination, saying that both are “probably life-long” and that no boosters will be needed.

“There is more data on natural immunity than there is on vaccinated immunity, because natural immunity has been around longer,” Makary claimed. “We are not seeing reinfections, and when they do happen, they’re rare. Their symptoms are mild or are asymptomatic”

[https://www.medscape.com/viewarticle/952033?src=WNL\\_dne\\_210528\\_mscpe\\_dit&uac=391223BT&impID=3404007&faf=1](https://www.medscape.com/viewarticle/952033?src=WNL_dne_210528_mscpe_dit&uac=391223BT&impID=3404007&faf=1)

"The papers are consistent with the growing body of literature that suggests that immunity elicited by infection and vaccination for SARS-CoV-2 appears to be long-lived," Scott Hensley, an immunologist at the University of Pennsylvania who wasn't involved with the research, told The New York Times.

<https://www.theblaze.com/news/johns-hopkins-professor-ignore-cdc-natural-immunity-works>

A professor at the renowned Johns Hopkins School of Medicine advised Americans recently to "ignore" guidance from the U.S. Centers for Disease Control and Prevention due to the public health agency's puzzling refusal to recognize natural immunity from previous infection.

<https://theprint.in/opinion/majority-indians-have-natural-immunity-vaccinating-entire-population-can-cause-great-harm/582174/>

“The scientific evidence is overwhelming that natural immunity attained after recovery from Covid infection is effective and long lasting. The immune system responds to infection by various mechanisms, including the production of specific antibodies, T-cells, and B-cells to protect nearly every recovered Covid patient from reinfection. After almost a year of pandemic, globally, only 34 cases and two deaths have been definitively identified as reinfections at the time of writing, out of the 90 million Covid cases and likely hundreds of millions of infections worldwide.

Vaccines cause the immune system of those inoculated to mimic the immune response that natural infection induces. While the immunity conferred by the Covid vaccines documented in the clinical trials is excellent, it is not as effective as the immunity conferred by natural infection. (Emphasis added)

Furthermore, those who have already developed immunity to Covid through natural infection are extremely unlikely to develop additional immunity from vaccination. For instance, in the Pfizer randomised trial, the vaccine was tested in previously infected patients to check for its safety in that group. But those same patients were excluded from the analysis of efficacy, presumably because the scientists understood that the vaccine would confer no additional benefit to them.”

Sanjiv Agarwal is the founder of the Good Governance India Foundation, Mumbai. Jay Bhattacharya is Professor of Medicine at Stanford University.

<https://7news.com.au/lifestyle/health-wellbeing/study-suggests-some-people-may-have-protection-against-covid-due-to-their-immune-system-c-1215337>

A large percentage of the population appears to have immune cells that are able to recognise parts of the SARS-CoV-2 virus, and that may possibly be giving them a head start in fighting off an infection.

In other words, some people may have some unknown degree of protection.

“What we found is that people that had never been exposed to SARS Cov2 ... about half of the people had some T-cell reactivity,” co-author of the paper Alessandro Sette from the Center for Infectious Disease and Vaccine Research at La Jolla Institute for Immunology, told CNN.

It's T cells like those, which reacted to the SARS-CoV-2 virus, that Sette and his co-author Shane Crotty discovered - quite by accident - in the blood of people collected several years before this pandemic began.

They were running an experiment with COVID-19 convalescent blood.

Because they needed a “negative control” to compare against the convalescent blood, they picked blood samples from healthy people collected in San Diego between 2015 and 2018.

‘People that have never seen this virus have some T-cell reactivity against the virus.’

“It is conceivable that if you have 10 people that have reactivity and 10 people that don't have the pre-existing reactivity and you vaccinate them with a SARS CoV-2 vaccine, the ones that have the pre-existing immunity will respond faster or better to a vaccine,” said Sette.

“The beauty of that is that that is a relatively fast study with a smaller number (of people)...

“So, we have been suggesting to anybody that is running vaccine trials to also measure T-cell response.”

“The implications of having some pre-existing immunity suggests that maybe you need a small proportion of the population to be impacted before the epidemic wave.

[https://m.dailyhunt.in/news/india/english/outlook-epaper-outlooke/vaccinating+those+who+have+recovered+from+covid19+is+a+wasteful+exercise+scientists-newsid-n252717142?s=a&uu=0x830173843ae3c60d&ss=pd&fbclid=IwAR2kPbkIwfuNrZQR3lncn6D0uLLK6\\_okYJI7BbxzTyUnJxTdgtzF0ZLifJc](https://m.dailyhunt.in/news/india/english/outlook-epaper-outlooke/vaccinating+those+who+have+recovered+from+covid19+is+a+wasteful+exercise+scientists-newsid-n252717142?s=a&uu=0x830173843ae3c60d&ss=pd&fbclid=IwAR2kPbkIwfuNrZQR3lncn6D0uLLK6_okYJI7BbxzTyUnJxTdgtzF0ZLifJc)

Meanwhile, Dr Sanjay Rai, President, Indian Public Health Association (IPHA), says that current scientific studies on Covid-19 show that natural immunity lasts very long and so Covid-recovered population should be excluded from the current vaccination drive.

'As India is very close to herd immunity, we should not waste taxpayers' money on inoculating those people who have already recovered from Covid-19,' Dr Rai, who is also one of the principal investigators of a vaccine clinical trial, said.

He seconds Dr Muliyl and says that scientific evidence states that the human body produces long lasting antibodies against all such viruses which spread through respiration such as smallpox, measles and influenza.

"There is no disease in which the antibodies developed through vaccines last longer than natural antibodies," Dr Rai said.

<https://www.news-medical.net/news/20210426/Prior-SARS-CoV-2-infection-and-Pfizer-BioNTech28099s-COVID-19-vaccine-provide-similar-immunity.aspx>

The overall estimated efficacy of vaccination was 92.8% for documented infection, 94.2% for hospitalization, 94.4% for severe illness and 93.7% for death.

Similarly, the overall estimated level of protection among individuals with prior SARS-CoV-2 infection was 94.% for documented infection, 94.1% for hospitalization and 96.4% for severe illness.

<https://www.medrxiv.org/content/10.1101/2021.04.20.21255670v1>

Vaccination was highly effective with overall estimated efficacy for documented infection of 92.8% (CI:[92.6, 93.0]); hospitalization 94.2% (CI:[93.6, 94.7]); severe illness 94.4% (CI:[93.6, 95.0]); and death 93.7% (CI:[92.5, 94.7]).

Similarly, the overall estimated level of protection from prior SARS-CoV-2 infection for documented infection is 94.8% (CI:[94.4, 95.1]); hospitalization 94.1% (CI:[91.9, 95.7]); and severe illness 96.4% (CI:[92.5, 98.3]). Our results question the need to vaccinate previously-infected individuals. (Emphasis added)

Similarly National Institute of Health of US also also in its Research Matters observes on 26th January, 2021.

<https://www.nih.gov/news-events/nih-research-matters/lasting-immunity-found-after-recovery-covid-19>

- The immune systems of more than 95% of people who recovered from COVID-19 had durable memories of the virus up to eight months after infection.

**II & III Serosurveys in India showing large population has already Developed Immunity and Infection Fatality Rate very low:**

But in India right from the month of June it was known that sizable population of India already was exposed to Corona and in next few months India was heading towards Herd Immunity.

As explained by renowned Epidemiologist Dr John Ionnidis whose article on WHO website shows the method of counting Infection Mortality Rate from serosurveys, these serosurveys also proved low IFR in India.

Before showing the full sequence of antibody development in Indian population starting from the month of June, 2020, we want to point out how the latest sero-survey done by AIIMS along with WHO in the month of April-May, 2021 shows that majority of not only adults but even children are exposed to Coronavirus and have antibodies, and therefore they are immune and even herd immunity levels are achieved.

<https://www.hindustantimes.com/india-news/kids-adults-have-similar-antibodies-sero-survey-101623953000262.html>

The seroprevalence, presence of virus-fighting antibodies against Sars-CoV-2, among children was 55.7% across five study sites, in comparison to 63.5% among adults -- the difference was judged to be statistically insignificant.

“Wherever the prevalence of antibodies was high among the adults, it was high among the children, busting the myth that so far children have been less affected. The thing is, the binding of the virus to the human cell receptors is not very good in children and hence they mostly develop either asymptomatic or mildly symptomatic infection,” said Dr Sanjay Rai, one of the authors of the study and the head of the department of community medicine at the AIIMS.

He added, “People have been saying that after the young, the third wave will impact children more. The fact is most of them have been already exposed to the infection along with their families. And, numerous studies have now shown that

natural infection can provide better and longer protection against a second infection.”(Emphasis added)

<https://science.thewire.in/.../icmr-seroprevalence.../>

So, by June 4th, they knew from the sero survey that there are already 64 lacs cases in India, infection mortality rate very low 0.08%, less than seasonal flu.

Now instead of telling the nation the obvious that it is not a dangerous disease, what they say is that they detected only 52592 cases and missed others.

Other people not tested had corona, recovered and had antibodies so what is the problem?

And once infected test can remain positive up to 2 months!

And as it later came out for whatever reason in this scientific study also some facts were hidden which were showing even larger number of people were actually affected. And so the IFR was still lower.

<https://www.telegraphindia.com/india/how-covid-numbers-were-hushed-up/cid/1792482>

Independent health experts tracking India's response to the Covid-19 pandemic said the directive to conceal high prevalence data in cities in early May might have been part of efforts to portray the lockdown as a success.

“The abrupt nationwide lockdown with a four-hour notice had brought misery and tragedies to many,” said a senior physician at the All India Institute of Medical Sciences, New Delhi, who requested anonymity. “The country's health research community has been used to portray the lockdown as a success.”

The professor added: “India was under complete lockdown during April and May — a paper reporting 30 or 48 per cent prevalence rates in early May would have put a question mark on the claims about a successful lockdown and containment.”

High prevalence means low infection mortality rate so do they want to hide high prevalence rate or low mortality rate?

Most surveys in India at various places showed increasing prevalence and reaching towards Herd Immunity.

<https://indianexpress.com/article/cities/mumbai/two-private-labs-in-mumbai-find-antibody-positivity-rate-at-24-3-pc-6517163/>

This is good news. This shows a large number of people who were exposed to coronavirus had no symptoms and got immunity,” said Dr Sujata Baveja, head of microbiology in Sion hospital.

So in July, 2020,

Latest data also suggests Delhi is more exposed to coronavirus than Mumbai. Combined data of sero surveillance conducted by the National Centre for Disease Control (NCDC) and samples tested by Thyrocare show a 25.10 per cent positivity rate. The NCDC did an IgG antibody test on 21,387 people in 11 districts of Delhi and found around 5,022 positive (23.48 per cent). Private laboratory Thyrocare tested 3,956 people and found antibodies in 1,340 (33.8 per cent).

But those in slums like Dharavi had even 57% seroprevalence without any high mortality.

<https://www.livemint.com/news/india/mumbai-sero-prevalence-of-57-found-in-slums-and-16-in-residential-societies-11595952896909.html>

Mumbai: Sero-prevalence of 57% found in slums and 16% in residential societies.

<https://mumbaimirror.indiatimes.com/coronavirus/news/mumbai-sero-survey-57-per-cent-respondents-in-slums-16-per-cent-in-residential-societies-exposed-to->

[coronavirus/articleshow/77227080.cms?utm\\_source=contentofinterest&utm\\_medium=text&utm\\_campaign=cppst](https://coronavirus/articleshow/77227080.cms?utm_source=contentofinterest&utm_medium=text&utm_campaign=cppst)

Overall, the sero-survey found that 40 per cent had the coronavirus infection.

<https://indianexpress.com/article/india/india-covid-19-august-sero-survey-6637821/>

ICMR did sero survey, the blood test, from 17th August to 22nd September to detect antibodies, to know how many persons already had Corona.

And it was found that 6.6 % of the people above 10 years of age already had it, which means 7.48 crore people had it.

It takes 15 days to produce antibodies so these were the patients between 2nd August to 7th September.

Number of deaths during those days was around 37000 total.

If we count only this much the death rate is 0.049 percent which is less than seasonal flu.

How is it a serious disease?

Doctors must know that within 2 months antibodies go down and as such because it was told to the people to scare them, now even people know it.

When such a survey was done in in July end, more than 50% of the people had antibody in slums. And in this survey which was extended upto 22nd September 15.6% of people in slums had antibodies but because people had immunity not many new cases there.

[https://theprint.in/india/punes-first-sero-survey-shows-over-51-infected-by-covid-in-5-high-incidence-areas/483945/?fbclid=IwAR0GMXTi8vH5j9vDv3p2smu6R\\_RiKXFgEUnr8k-Ohbfy8Oo7RD3pU5-zdVs](https://theprint.in/india/punes-first-sero-survey-shows-over-51-infected-by-covid-in-5-high-incidence-areas/483945/?fbclid=IwAR0GMXTi8vH5j9vDv3p2smu6R_RiKXFgEUnr8k-Ohbfy8Oo7RD3pU5-zdVs)

The study, conducted between 20 July and 5 August in five high-incidence administrative wards of Pune, shows that an average of 51.5 per cent of the people had been infected by Covid-19. The incidence ranged from 36.1 per cent to 65.4 per cent in the selected areas.

On July 24,

<https://indianexpress.com/article/cities/ahmedabad/only-17-61-per-cent-has-antibodies-ahmedabad-civic-body-sero-survey-6520952/>

This means out of 5570000 population of Ahmadabad 980320 got infected and 99% of them had no symptoms even and got antibodies, that is some immunity which protected them and did not get any symptoms.

1500 deaths from 980320 gives case fatality rate of 0.14 percent. 0.08% in Delhi, can call it nearly same.

Head of microbiology dept Mumbai explains Mumbai like this. Dr Ioannidis of Stanford university, one of the top ten most quoted Epidemiologist explains like this. Why the media not calling such scientists?

Let us understand, Corona is not a deadly virus.

City after city is giving same results!

<https://indianexpress.com/article/cities/mumbai/mumbai-75-test-positive-for-covid-19-antibodies-sero-survey-finds-7072331/>

In one of the highest sero-prevalence rates reported in the country, 605 of 806 patients who underwent antibody testing at five slums in Cuffe Parade tested positive for coronavirus antibodies.

Conducted between October 5 and 10 at five locations in the ward, the tests showed that 75% of the population tested positive for Covid antibodies.

[https://indianexpress.com/article/india/first-signs-of-herd-immunity-in-small-population-groups-in-pune-7057931/?fbclid=IwAR2v4i\\_LFWx8LQcfFwHmBDJl1RWt62zyfMF4eHefATpPn8ZpSxwnxPbtVCE](https://indianexpress.com/article/india/first-signs-of-herd-immunity-in-small-population-groups-in-pune-7057931/?fbclid=IwAR2v4i_LFWx8LQcfFwHmBDJl1RWt62zyfMF4eHefATpPn8ZpSxwnxPbtVCE)

This is the first study that followed up on an earlier sero-survey to detect the presence of ‘neutralising’ antibodies in infected persons. And though the researchers who carried out the study are careful not to suggest that the city was approaching ‘herd immunity’, this is the first documented case in the country where the infection rate in a population group had gone up so high that the concept of herd immunity could already be playing out.

<https://indianexpress.com/article/cities/pune/almost-50-in-karnataka-were-infected-by-august-sero-study-7049909/?fbclid=IwAR00PdgyOON-gO0XOsEfFqRok6G6xecF9I8JgHBd5IGlIbcKxzBdv1a-t8>

Almost half of Karnataka’s population was infected with Covid-19 by August. A seroprevalence study indicated that at least 44.1 per cent of the population in rural areas of Karnataka and 53.8 per cent in urban areas were exposed to the coronavirus, and have therefore developed antibodies for the infection.

<https://fastkashmir.com/2020/11/first-ever-district-wise-sero-survey-of-sars-cov-2-in-kashmir-shows-overall-prevalence-of-38-8/>

Srinagar, Nov 18: The first ever sero-prevalence study in Kashmir division for SARS COV-2 specific IgG antibodies conducted across all ten districts shows IgG antibodies among 38.8% sampled population.

In a population of 15 lacs, where newspapers were shouting hotspot!, Total deaths till 27th September were 285 deaths.

Sero survey from 15th October, counting total deaths is to count on higher side, and still it comes to 0.057%, less than seasonal flu! NO VACCINE NEEDED!

<https://theprint.in/health/india-is-missing-about-90-infections-for-every-covid-case-latest-govt-analysis-shows/567898/>

Latest analysis by DST panel, that predicted end of Covid pandemic in India in February 2021, finds that about 60 per cent Indians have been infected so far.

An analysis of India's Covid numbers till last month has thrown up these figures. It was conducted by members of a panel formed by the Department of Science and Technology (DST), the same committee that developed the India-specific supermodel that predicted that the pandemic will taper off by February 2021 in India. An analysis in September had shown that India had missed about 60-65 infections for every detected case.

“The India figure is about 90 infections missed for every case. If you compare that with countries like Italy and the United Kingdom, it is about 10-15 missed infections for every case. It is important to understand that these people were never tested because they never exhibited any symptoms,” he added.

January, 1, 2021

<https://www.india.com/news/india/india-moving-towards-herd-immunity-as-covid-19-cases-declining-no-need-to-panic-over-uk-strain-health-experts-4302153/>

New Delhi: Health experts said on Thursday that India seems to be moving towards getting herd immunity from COVID-19 as cases decline. Dr (Prof) Sanjay Rai, Professor of Community Medicine at AIIMS said there is no need to panic over the new coronavirus strain detected in the UK as according to reports it is not as virulent. Also Read - In a First, Signs of 'Herd Immunity' Witnessed in Small Population Groups in Pune: Report

“Perhaps, we are moving towards herd immunity because in India the cases are coming down. One of the classical examples is Dharavi slum of Maharashtra. As far as the number of cases is concerned, it depends upon testing,” he said

By January 27, 2021

<https://indianexpress.com/article/india/sero-survey-delhi-past-50-near-herd-immunity-7161606/>

The fifth round of serological surveillance conducted in Delhi has suggested that more than 50 per cent of those surveyed have developed antibodies against Covid, officials told The Indian Express.

This is the highest seroprevalence found during surveys conducted by the Delhi government since the Covid outbreak and, according to experts, indicates that the city is moving closer to achieving herd immunity.

Then why vaccinate the whole population?

While it is true that people who do not show any antibody increase in current wave and never tested positive can also have immunity against Covid-19 as

Is explained here:

<https://lockdownsceptics.org/what-sage-got-wrong/>

I say this because its well understood that not every person, infected by a respiratory virus, goes on to produce antibodies. And many people, having prior immunity, never get properly infected anyway. We know that almost all those who became very unwell and were in hospital did produce antibodies, sometimes such that this could be detected months later. But those who had milder responses to the virus did not all produce antibodies. (Emphasis added)

But India having impossibility of lockdown or isolation in strict sense because of our objective conditions in slums and villages actually lesser number of

percentage to get infected is required to achieve Herd immunity is explained in this paper.

<https://science.sciencemag.org/content/369/6505/846.full>

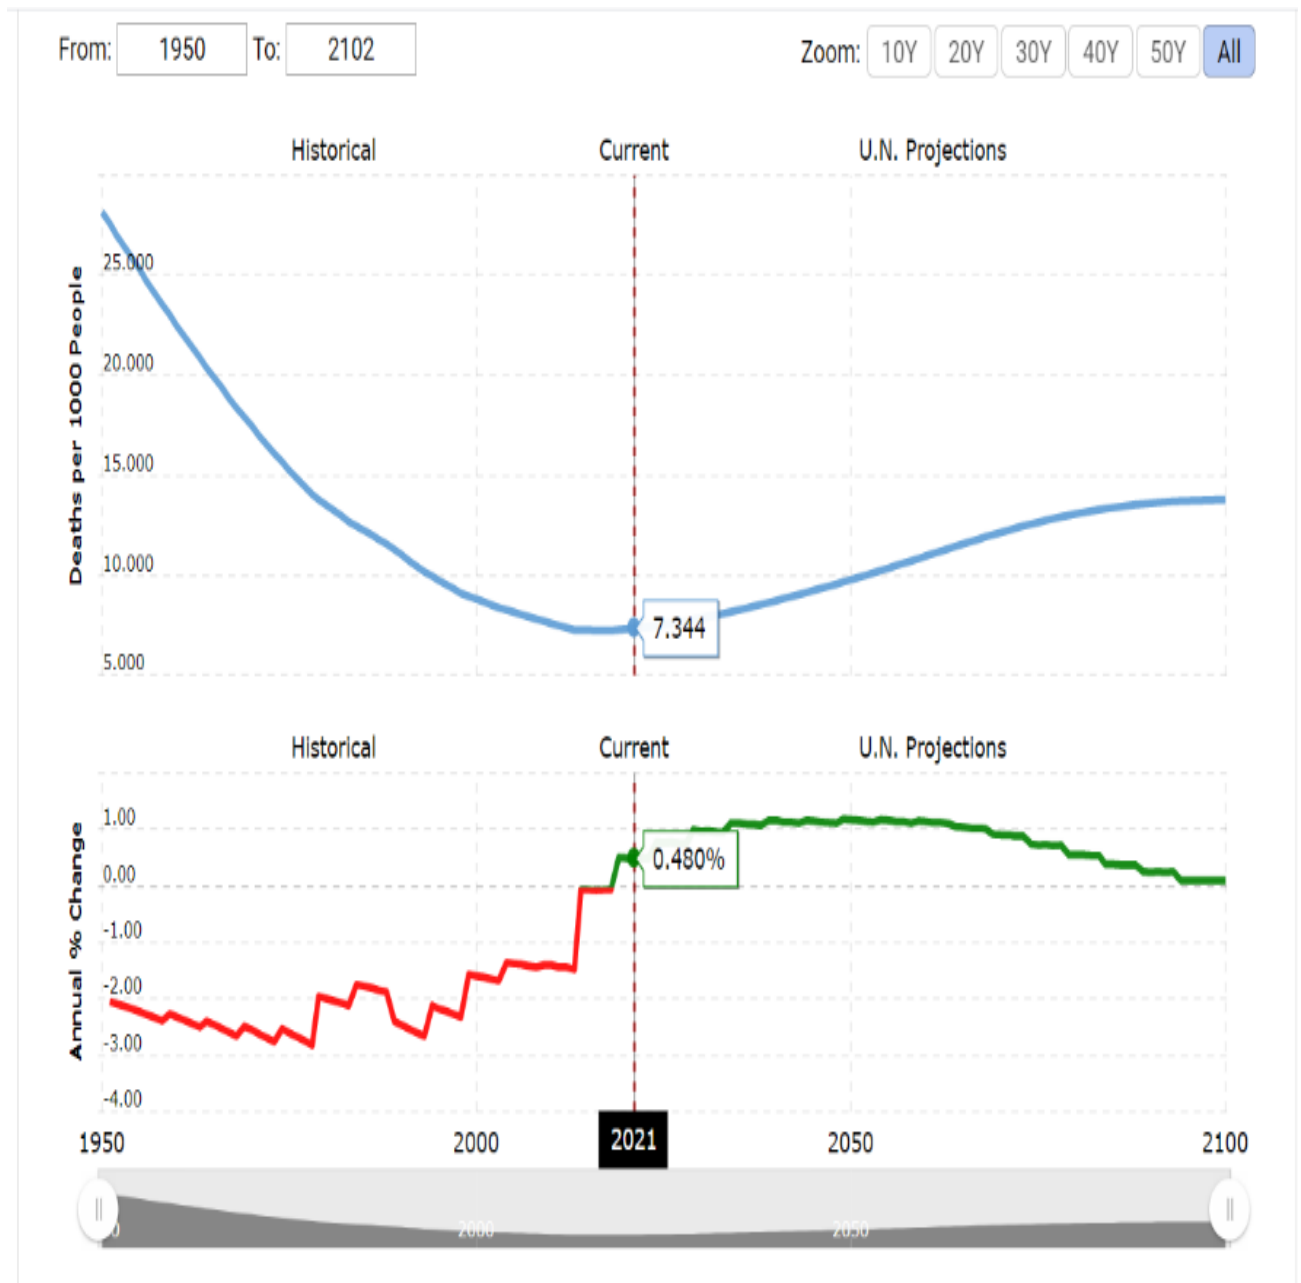

“Using a model, we show that population heterogeneity can affect disease-induced immunity considerably because the proportion of infected individuals in groups with the highest contact rates is greater than that in groups with low contact rates. We estimate that if  $R_0 = 2.5$  in an age-structured community with mixing rates fitted to social activity, then the disease-induced herd immunity level can be ~43%, which is substantially less than the classical herd immunity level of 60% obtained through homogeneous immunization of the population. Our estimates should be interpreted as an illustration of how population heterogeneity affects herd immunity rather than as an exact value or even a best estimate.”

**IV The death rate per thousand in the year 2020 in India as well as around the World, does not show excess deaths when compared to the data of last 10 years.**

## V That the increase in Corona deaths is a fact world over after Vaccination Drive.

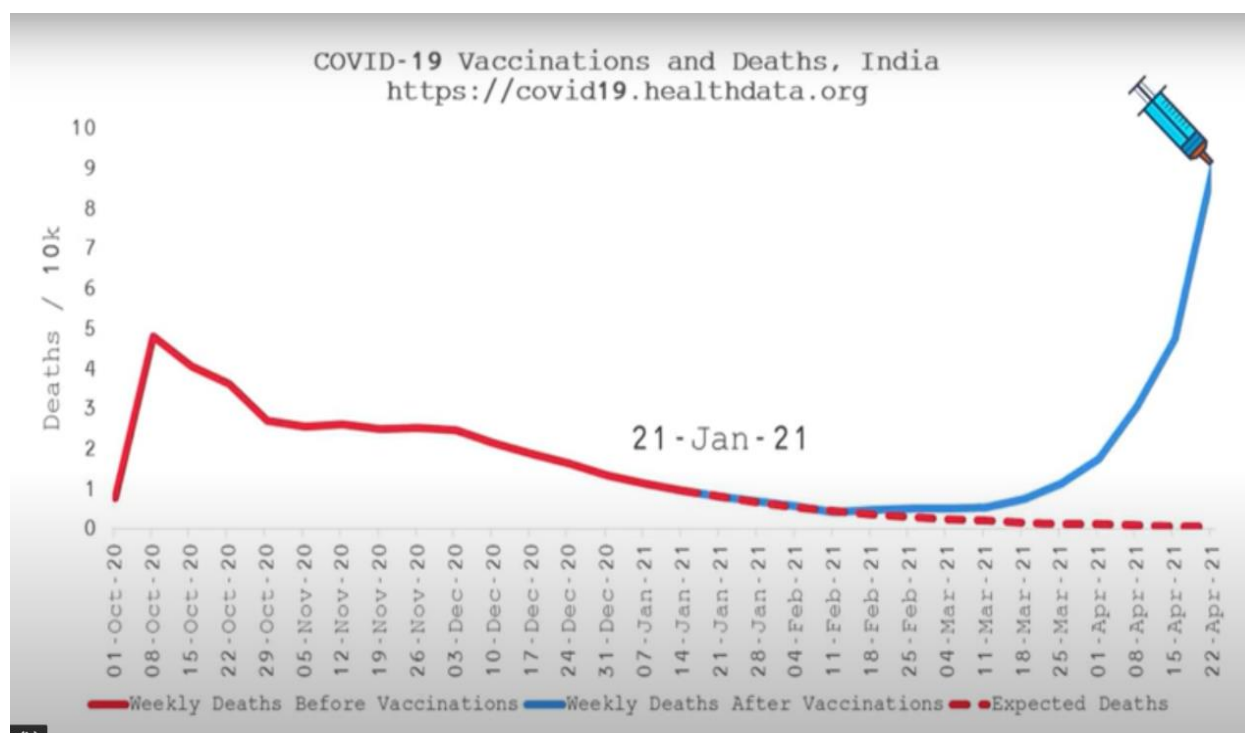

<https://www.globalresearch.ca/terminate-emergency-use-authorization-eua-complete-phase-3-trials/5743896>

For example, we are now being told that the sudden uptick in deaths in various parts the country, are the sign of a “4th Wave”. Naturally, these fatalities are being blamed on the “variant” which is the current ‘hobgoblin du jour.’ What the media and the pundits fail to mention is that the unexpected rise in cases and deaths is only taking place in areas that are engaged in mass vaccination campaigns, a fact that can be easily extrapolated from the chart below.

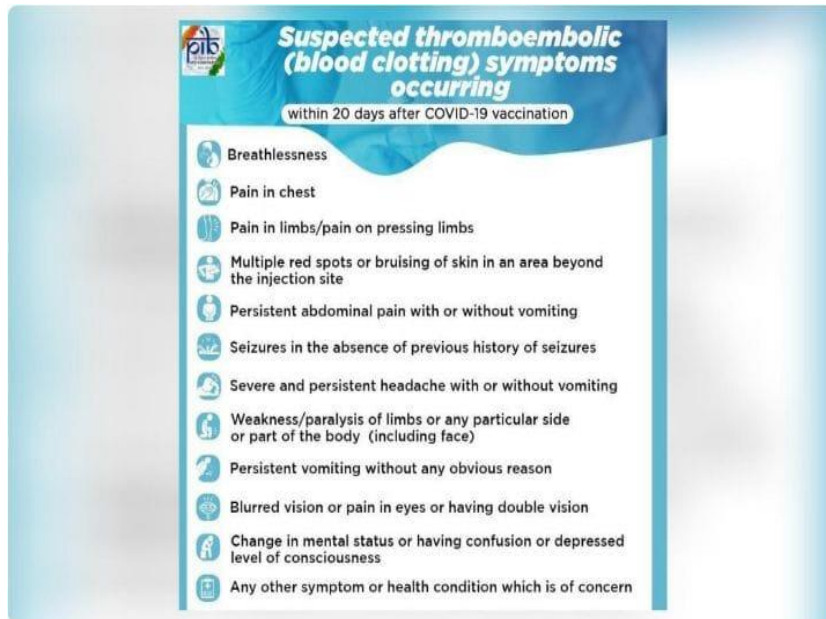

I don't know why this is happening, and I certainly don't think the drug companies have laced their injections with Covid-19. But it certainly deserves to be investigated, don't you think?

For India how the vaccine drive has affected Corona death rate and with vaccine shortage the death rate is going down, but with vigorous drive from 21<sup>st</sup> June it is anybody's guess what can happen when this is what happening world is over.

**If Indian population is having the required immunity for the virus for which the vaccines are made, and as studies are showing the immunity is long lasting. Then why should the drive to vaccinate whole population with its potential serious side-effects which Government itself has recently warned and lack of safety data is also accepted in Government document along with the other warnings by experts, carried out? (Attached are GoI warnings and document)**

## Govt lists suspected blood clot symptoms occurring within 20 days of vaccination

The government has shared a list of suspected thromboembolic (blood clotting) symptoms occurring within 20 days after receiving any COVID-19 vaccine, while particularly naming Covishield. These include breathlessness, chest pain, seizures, persistent vomiting and blurred vision among others. A government report said that bleeding and clotting events following vaccination were "miniscule" in India.

## 10.1 INTRODUCTION

COVID-19 vaccines have limited safety data. Therefore, it is important to monitor the safety of these vaccines when administered to a large population. A robust AEFI surveillance system would enable us to monitor adverse events and better understand the safety profile of the vaccines. During COVID-19 vaccinations, AEFIs must be rapidly detected and promptly responded to or else it can undermine confidence in the vaccine and immunization programme. All AEFIs should be reported as per the National AEFI Guidelines.

**Programme managers should be aware of the following:**

- COVID-19 vaccination will involve vaccination of large population over a short period of time. This may lead to increased reporting of AEFIs;
- During mass campaigns, there can be chances of anxiety reactions and occurrence of programme errors, especially if it involves reconstitution of vaccines using diluents; and
- Immunization errors which might lead to AEFI must be prevented at all costs through proper training, regular and intensive monitoring and supervision and strict adherence to proper vaccine / diluent

Any adverse event following COVID-19 vaccination must be reported. There is no time limit (between vaccination and onset of symptoms) for reporting AEFIs. If the health worker or the treating physician or anyone suspects the event to be due to vaccination, it should be reported.

**State and district authorities (DIO/CMO or the Block MO) should proactively reach out to all health care service providers such as medical colleges, hospitals (public, autonomous and private) and individual practitioners and sensitize them to report any adverse event following COVID-19 vaccine as per guidelines.**

Doctors should ask and record history of COVID-19 vaccination in OPD prescriptions, casualty records, clinical treatment sheets, etc. Patients with history of COVID-19 vaccination (any duration) in which onset of symptoms has occurred AFTER COVID-19 vaccination should be considered as AEFIs and reported by the treating doctor to the nearest PHC doctor or District Immunization / RCH Officer in Case Reporting Format or telephonically. During investigations conducted by the DIO/district AEFI committee, all treatment records of the patient must be shared for causality assessment.

Professional bodies like IAP, IMA, IPHA, partner agencies like WHO-NPSP, UNICEF, UNDP, USAID, PATH and others should also be encouraged to support AEFI surveillance.

Blank copies of Case Reporting Formats (CRF) should be available with potential reporters to capture AEFI details. The reporter should also know whom to report and how to report. Thereafter, the case should be investigated by the district health authorities (DIO with support of the district AEFI committee members) as per national AEFI guidelines.

Even after issuing such warnings about blood clotting side-effects, our medical authorities are not doing such simple tests to establish or confirm such serious side-effects of these gene-based vaccines.

<https://dissident.one/2021/06/04/prof-bhakdi-levensbedreigend-letsel-verstoorde-bloedstolling-bij-alle-gevaccineerden/>

During his speech at the symposium, [Prof. Bhakdi](#) about a phone call from a medical colleague. He had examined the blood of all the people in his practice before and after the mRNA vaccination: The blood clotting was activated ("turned on") in more than 30 percent of the vaccinates, or 20 of the 60. According to Bhakdi, the activation of blood clotting is basically a life-threatening injury. Or in other words. "The blood clots in the veins".

## **Vaccinations must be stopped: Potentially fatal side effect**

Administering a substance that activates blood clotting in the body would be extremely dangerous, according to Bhakdi, [Report24 reports](#) . The process must be stopped immediately, he said. Currently, a second specialist from Bavaria is said to have already confirmed the results – confirming activation of blood clotting in 100% of all vaccinated individuals. In total, the Bhakdi research group is conducting similar studies with 50 different doctors in different countries. A precise study design was developed for this purpose. The doctor's results are just being verified and will be published soon.

## **Antibody Dependent Enhancement As A Consequence To Vaccination:**

In a letter to European Medicines Agency experts have highlighted this point again along with many other untested side-effects.

<https://doctors4covidethics.medium.com/doctors-and-scientists-write-to-the-european-medicines-agency-warning-of-covid-19-vaccine-dangers-edfebb0419a7>

“1e. Furthermore, long term adverse effects, in particular the danger of immune dependant enhancement of disease and adverse effects of subsequent vaccinations are impossible to predict.

The European Medicines Agency, as the regulator re vaccines for almost 450 million people across 27 European Union member states, must inform the public and the relevant authorities of this profoundly important issue.

2. We believe that the number of deaths due to the gene-based vaccines to which you have publicly admitted is but a small percentage of the actual number of deaths due to the gene-based vaccines.”

## Conclusion:

All the available literature points to the fact that on one hand as surveys have shown a large proportion of population is already infected with Corona at one or the other time and umpteen number of studies have shown that the immunity from natural infection is better and long lasting. So vaccine is not required.

And on the other hand the vaccination drive has its own harmful effects which was warned by experts and now proving right in studies and data of our country.

That our government was warned in the month of August, 2020 and again in, 2021 February against following WHO advices blindly not only about vaccination but also against disproportionate measures taken by GoI.

[https://drive.google.com/file/d/1hghf8Bh3AIUi5HxrnPA8FZeQqo77e\\_xN/edit](https://drive.google.com/file/d/1hghf8Bh3AIUi5HxrnPA8FZeQqo77e_xN/edit)

<https://drive.google.com/file/d/1r1h4Hck08k6QWH2enq-3xgPQRGUWfq2r/view>

Also letters like this kept on warning about the course being taken by most governments being not scientific.

<https://www.bmj.com/content/371/bmj.m4425/rr-31>

Many scientific facts are suppressed these days. Apart from one quoted below, facts about rt-PCR test, number of deaths, etc are enumerated in this letter to editor.

The third and possibly the most consequential suppression of science relates to the narrative that people do not develop immunity following a Covid infection. We know that immunity to SARS-CoV-1 is very durable, persisting for at least 12-17 years [8-10]. Immunologists know that immunity to SARS-Cov-2 is no different. This is confirmed by many eminent scientists including Beda M Stadler, the former Director of the Institute for Immunology at the University of Bern and Professor Emeritus (Ivor Cummins, Ep91 Emeritus Professor of Immunology

[https://www.livescience.com/new-coronavirus-compare-with-flu.html?fbclid=IwAR1xrQir2CO2WKmFvrukXavODG2xJNvFuxOfXR8LnFA\\_1YMZH9F0VBMPDAc](https://www.livescience.com/new-coronavirus-compare-with-flu.html?fbclid=IwAR1xrQir2CO2WKmFvrukXavODG2xJNvFuxOfXR8LnFA_1YMZH9F0VBMPDAc)

“The death rate from seasonal flu is typically around 0.1% in the U.S., according to news reports.”

Serological survey interpretation of in India shows case fatality rate for Corona 0.035, 0.08, 0.1 And 0.14%. How is it different?

And we don't carry out mass vaccination for seasonal Flu then why suddenly for Covid-19?

It is recommended that the vigorous drive to vaccinate the whole population must be stopped immediately, in the light of already immunised population with antibodies because of potential and already reported risks of vaccinating an already immune population.

**IN THE SUPREME COURT OF INDIA**  
**CIVIL ORIGINAL JURISDICTION**  
**WRIT PETITION (CIVIL) NO.      OF 2021**  
**(PIL UNDER ART. 32 OF THE CONSTITUTION OF INDIA)**

**IN THE MATTER OF:**

Dr. Ridhi Arora & Others

...PETITIONERS

Versus

Union of India

...RESPONDENT

**Application seeking permission to file lengthy synopsis and list of dates**

To

Hon'ble. The Chief Justice of India and

His Companion Justices of the Supreme Court of India

**Most respectfully Showeth:**

- a. The Present Application is filed by Petitioner in the captioned Writ Petition. That the contents of the petition are not repeated here for the sake of brevity but the same may be read as part and parcel of the instant application.
- b. It is most humbly submitted that the issues involved in the petition are complicated and facts are plenty, a detailed description whereof is necessary, and, hence, the lengthy synopsis.

- c. This application is moved bonafide and prejudice none.

PRAYER

It is prayed, therefore, most humbly, that Your Lordships be pleased to:

- i. Permit the petitioners to file the lengthy synopsis and list of dates;
- ii. Pass any other order deemed fit and proper.

And for this act of kindness, Petitioner as in duty bound shall ever pray.

**IN THE SUPREME COURT OF INDIA**  
**CIVIL ORIGINAL JURISDICTION**  
**WRIT PETITION (CIVIL) NO.      OF 2021**  
**(PIL UNDER ART. 32 OF THE CONSTITUTION OF INDIA)**

**IN THE MATTER OF:**

Dr. Ridhi Arora & Others

...PETITIONERS

Versus

Union of India

...RESPONDENT

**Application seeking exemption from filing notarized affidavit**

To

Hon'ble The Chief Justice of India and

His Companion Justices of the Supreme Court of India

**Most respectfully Showeth:**

- a. The Present Application is filed by Petitioner in the captioned Writ Petition. That the contents of the petition are not repeated here for the sake of brevity but the same may be read as part and parcel of the instant application.
- b. On account of Covid-19, the affidavit signed by the petitioner could not get attested by Notary/Oath Commissioner. Hence, the present

application has been filed by the Petitioner seeking exemption from filing attested and notarized copy of the affidavit.

- c. Petitioner further submits that the attested copy of the affidavit shall be filed upon the directions of this Hon'ble Court.

#### PRAYER

In the above circumstances it is therefore most respectfully prayed that this Hon'ble Court may be pleased to:

- i. Grant exemption to the Petitioner from filing attested copy of the affidavit in support of the Writ Petition;
- ii. Pass any such writ/order/directions as this Hon'ble Court may deem fit and proper in the facts and circumstances of the case.

And for this act of kindness, the petitioners shall be forever grateful.
