Are these mere coincidences?

Finland has become the first country in the EU to vaccinate against the H5N1 avian flu, currently spreading among US cattle, announcing that it will use the Sequirus vaccine.

Sequirus – All Roads Lead To Bill Gates' Liverpool Biotech Powerhouse

EU to secure 40 million avian flu vaccines for 15 countries

<https://www.reuters.com/business/healthcare-pharmaceuticals/eu-secure-40-million-avian-flu-vaccines-15-countries-officials-2024-06-10/>

Scientists are testing next-generation vaccines to deal with the spread of bird flu in the United States. The vaccines use the same mRNA technology. The U.S. Agriculture Department is planning to test a vaccine, developed by University of Pennsylvania researchers, by giving it to cows.

How (and why) Bird Flu is About to Enter the “Mass Testing” Phase.

All of these stories talk about “gathering data”, “flying blind”, and the need for “prevention”. And all of that is really code for “testing”. Almost every article talks up the need to increase testing – both of humans and animals.

But anyone who's been paying attention since 2020 knows PCR tests don't gather data, they create data. They are machines for generating “cases”. Far from preventing a pandemic, they can be used to manufacture one.

JUST IN - Finland to begin administering largely untested CSL Seqirus H5N1 Bird Flu vaccinations to humans, in world first, even with no reported human cases.

"The vaccine will be offered to those aged 18 or over who are at increased risk of contracting avian influenza due to... [Show more](#)

5 **WARNINGS AND PRECAUTIONS**

5.1 Hypersensitivity Reactions

Appropriate medical treatment and supervision must be available to manage possible severe allergic reactions (e.g., anaphylaxis) following administration of the vaccine.

5.2 Guillain-Barré Syndrome

If Guillain-Barré syndrome (GBS) has occurred within 6 weeks of receipt of prior influenza vaccine, the decision to give AUDENZ should be based on careful consideration of the potential benefits and risks. The 1976 swine influenza vaccine was associated with an elevated risk of GBS. Evidence for a causal relationship of GBS with other influenza vaccines is inconclusive; if an excess risk exists, it is probably slightly more than 1 additional case per 1 million persons vaccinated.¹

5.3 Limitations of Vaccine Effectiveness

Vaccination with AUDENZ may not protect all recipients.

Immunocompromised persons, including those receiving immunosuppressive therapy, may have a diminished immune response to AUDENZ.

The US government has given \$176 million to Moderna to develop an mRNA-based pandemic influenza vaccine that would work against bird flu.

US pays Moderna \$176m to develop bird-flu vaccine

Moderna is being given \$176m to work on a bird-flu vaccine, in case there is ever a human pandemic.
